

Retail investors need portfolio updates where they already chat.

Current pain points

- Portfolio checks require opening broker apps repeatedly.
- Price alerts and summaries are scattered across apps.
- New investors want guidance without accidental real trades.
- Long conversations lose context across sessions.

Phase 1 goal: prove a WhatsApp-first assistant can connect messaging, broker data, memory, and safe workflows.

hi

Welcome. Please review Privacy and Terms, then reply AGREE to continue.

AGREE

Thanks. Next, connect Zerodha securely through the official login link.

set alert for INFY above 1600

Alert created for NSE:INFY above 1600. I will notify you when it triggers.

A WhatsApp bot that connects to Zerodha and manages portfolio conversations.

1

User messages bot

WhatsApp Cloud API receives text from the user.

2

Backend processes

FastAPI handles the webhook with inline background tasks for the free demo.

3

Context layer

Bot loads user profile, consent, broker state, memory, and intent.

4

Zerodha connect

Official Kite login links each WhatsApp user to their own account.

5

Bot replies

WhatsApp response is sent with safe portfolio context.

Live

Render webhook replies on real WhatsApp.

Opt-in

Privacy/terms consent is stored per user.

Context

Cleaned prompt context uses profile, broker state, and memory.

Alerts

External cron checks prices and sends WhatsApp alerts.

Built as a deployed assistant with memory, broker context, and guardrails.

WhatsApp	Meta Cloud API for inbound and outbound messages.
FastAPI	Webhook verification, message parsing, legal pages, and Zerodha callback.
Render	Single free web service using QUEUE_MODE=inline for the MVP demo.
cron-job.org	Scheduled HTTP trigger checks saved alerts every few minutes.
Supabase	Postgres storage for users, memory, broker tokens, alerts, and audit events.
Zerodha	Kite Connect login, holdings, and LTP prices.
LangChain + OpenRouter	Improved prompts for intent, safe replies, and summaries.

Guardrail design

No direct advice

The assistant avoids personalized buy/sell recommendations.

Backend truth

LLM receives cleaned context and never guesses holdings, prices, or broker status.

Paper trading

Buy/sell flows require confirmation and do not place real orders.

Context memory

Recent messages plus durable summaries keep long conversations coherent.

Designed for Indian retail investors who want a low-friction portfolio companion.

Ideal customer

Beginner and intermediate Indian retail investors who use WhatsApp daily and want faster portfolio awareness.

Primary use cases

Consent onboarding, Zerodha connect, portfolio summary, scheduled price alerts, profile memory, and paper-trade confirmation.

Why now

Messaging-first workflows plus LLM memory make portfolio tools simpler and more accessible.

Phase 1 deliverables completed

- Deployed WhatsApp bot on Render.
- Consent flow and Zerodha connect link working.
- Alert creation plus scheduled checker configured.

Next build milestones

- Optional slash commands for safer user control.
- Richer portfolio insights and alert UX.
- Real WhatsApp Business number after prototype validation.
